KATEE DUPONT / A WORKING PORTFOLIO

TECHNOLOGY IS GREAT. WHEN PEOPLE CAN ACTUALLY USE IT.

I connect customers, business leaders, and technical teams to turn complicated processes into practical outcomes people can see and use.

WHY HIRE ME

What you get when you hire me

An experienced operator who can learn the landscape, align the right people, and start contributing.

Business judgment

I connect customer needs, financial priorities, process realities, and technology decisions.

Ownership without hand-holding

I clarify priorities, surface risks, follow through, and keep people informed.

Cross-functional influence

I translate between executives, customers, operations, and technical specialists.

Adoption, not just delivery

I focus on whether people use the solution and whether it improves an outcome.

TRACK RECORD

The results have substance

Selected results from enterprise accounts, ERP/SaaS, and operations. Each reflects a different role or portfolio.

200+

ACCOUNTS

Scaled post-sale service and account engagement at Summit 360.

80%

RETENTION

Managed-portfolio customer retention reported for Summit 360.

$5M

ANNUAL ERP / SAAS

Healthcare technology revenue portfolio managed at Lawson Software.

15%

RETENTION IMPROVEMENT

Reported retention improvement in healthcare ERP/SaaS accounts.

Additional documented outcome: 20% upsell rate in healthcare ERP/SaaS relationships.

EXPERIENCE

Enterprise relationships. Real execution.

I have worked where customer expectations, internal operations, and technical delivery meet.

SUMMIT 360 | Customer success at scale

Built and scaled post-sale onboarding and quarterly business review processes for a 200+ account portfolio. Standardized reporting, escalation response, and cross-functional follow-through.

LAWSON SOFTWARE | Enterprise ERP

Coordinated healthcare customers, executives, engineers, and delivery teams through software adoption, upgrades, customer issues, and renewals.

OPERATIONS + TECHNOLOGY

At Native Floral and Silicon Graphics, navigated frontline operations, enterprise solutions, procurement, and stakeholder dependencies.

PRACTICAL TECHNOLOGY

Technology I can show, not just name

Hands-on Microsoft business application and analytics work complements established enterprise experience.

Dynamics 365 Customer Service

Configured and tested training scenarios involving cases, queues, priorities, SLAs, user acceptance testing, and adoption support.

Power BI and analytics

Developed dashboards, DAX measures, KPIs, and executive-facing reporting for operational and community-energy project scenarios.

ALSO WORKING WITH

Power Automate • Dataverse • Power Apps • Copilot • Copilot Studio

These are training and project examples, not claims of production AI engineering or client implementations.

PROJECT CASE STUDY

From unfamiliar data to useful decisions

SMART NORTH INTERNSHIP | POWER BI | TEAM PROJECT

Challenge: make complex energy and community-impact information understandable for nontechnical stakeholders.

WHAT I DID

Co-developed an interactive Power BI dashboard with a teammate.

Led work on the technical framework and helped translate the analysis into accessible visuals.

Built reusable reporting support and prepared a stakeholder presentation.

Five-week project | Approximately 150 team hours | Presented to ~30 attendees

Dashboard screenshot from approved team project; modeled values are projections.

PROOF OF WORK

The skill is translating, not just charting

WHY IT MATTERS TO YOUR TEAM

I can enter a new domain, clarify the real question, build a reporting approach, and explain what the data can and cannot support.

I also distinguish modeled estimates from achieved outcomes and protect sensitive information.

TRANSLATE COMPLEXITY INTO ACTION

Research / Define the question / Build / Review / Present / Improve

This was a mentored internship team project, not a production deployment or a claim that the projected benefits were realized.

METHOD

How I solve the problems no one owns

My approach is practical: understand the issue, bring the right people together, and make improvements stick.

01	**LISTEN**	Understand goals, users, constraints, and what is already working.
02	**DIAGNOSE**	Find the friction, root cause, risk, or missing handoff.
03	**ALIGN**	Agree on ownership, priorities, and what success looks like.
04	**EXECUTE**	Test a practical fix and communicate progress.
05	**MEASURE**	Check adoption, impact, and what should become repeatable.

FIRST 30 DAYS

I can contribute from day one

I will not pretend to know your company immediately. I know how to get oriented, take ownership, and become useful.

DAY 1 | ORIENT

Learn the priorities. Meet key stakeholders. Understand the customers, business model, current commitments, and immediate risks.

WEEK 1 | FIND FRICTION

Map key workflows, ask what is slowing teams down, and identify a realistic first responsibility to own.

DAY 30 | SHOW PROGRESS

Deliver against assigned work, clarify handoffs, communicate risks, and propose a measurable improvement.

I do not need everything figured out before I begin.

I know how to figure out what matters and move it forward.

LET’S SOLVE SOMETHING WORTH SOLVING.

I speak customer, operations, and technology.

I bring enterprise account ownership, commercial judgment, cross-functional communication, and hands-on business application skills to teams that need clarity, progress, and real adoption.
